

# Manual control valve

## Description

---

This valve is operated by line pressure by means of a 3 way selector valve, this selector has the positions "open", "close" and "auto". In the "open" position the valve is fully opened, in the "close" position the valve closes slowly to avoid water hammer. "Auto" is used to receive external orders (from solenoid, pressure reducing pilot, etc.)

## Applications

---

The valve opens and closes in response to a local pressure command. It is possible to connect the valve to a remote pressure command.

## Available models

---

Plastic valves 1 1/2", 2" and 3"  
Metal valves threaded 1 1/2", 2", 2 1/2", 3" and 4"  
Metal valves grooved ("Victaulic") 2", 3" and 4"  
Metal valves flanged DN80, DN100, DN125, DN150, DN200, DN250 and DN300

## Dimensions / Pressure loss

---

Plastic valves

Metal valves threaded

Metal valves grooved "Victaulic"

Metal valves flanged
