

Level control valve (Float valve)

Description

Hydraulic control valve used to control water level in tanks and reservoirs by means of 2 way modulating float valve. When the water reaches the upper level the valve closes completely.

Applications

This valve helps to maintain the maximum level of water in tanks and reservoirs.

Available models

Plastic valves 1 1/2", 2" and 3"

Metal valves threaded 1 1/2", 2", 2 1/2", 3" and 4"

Metal valves grooved ("Victaulic") 2", 3" and 4"

Metal valves flanged DN80, DN100, DN125, DN150, DN200, DN250 and DN300

Dimensions / Pressure loss
